

Dear Nova Families,

I'm Kiril Arsovski and I'm scientist specialising in the field of biology. I am originally from Skopje, Macedonia. For the past few years, I have been working as a field researcher and biologist, exploring the national and regional biodiversity. I have taught many public courses and given lectures on ecology, biology and biodiversity.

I have dedicated my whole career to exploring and sharing knowledge. Teaching children and youth is one of my biggest passions along with my interest in biology. During my years of lecturing I have developed a system where through learning about the living creatures and life on Earth, pupils are learning about argumentation, logic and critical thinking. With experiments and observations, they are learning about nature on many different levels.

During me free time I like to learn and read about the latest data on exploring the planet and nature as well as hiking, climbing and being in the great outdoors.

I look forward to sharing my thoughts, opinions and definitions of nature with the students from Nova because nature is the first and single thing that gathers us all together.

Best regards,  
Kiril Arsovski
